FORK LEVELLING DEVICE

Increases safety while working with loads

Key Benefits

- Low investment cost
- Quick to install and calibrate
- Reduce damage to goods, pallets and racks
- Increase your productivity by working more efficiently
- No maintenance required

What is a Fork Levelling Device?

Every forklift driver may experience problems judging the tilt of their forks at height. The risk of pushing pallets in or out of the racks from a wrong tilt position of the forks is extremely high.

This device enables the driver to see the position of their forks immediately and prevents forks from damaging goods by stabbing into the load, folding racks or damaging pallets.

Key Features

- Simple calibration and mounting on the side of the mast by means of strong rare earth magnets (mount on left or right side of mast)
- Accurate within 0.25 of a degree, clearly indicates whether the forks are horizontal or not
- Can be used in combination with attachments such as bale clamps, telescopic forks, carpet mandrel, etc.
- Clear LED lights indicate the position of the forks
- Solid abs box with protection class IP67 and CE Approved
- Uses 2 standard D type alkaline batteries with a lifespan of 1 year (1600 working hours)
- Switches on and off automatically by motion sensor
- Not permanently fixed to mast
- Works on most lift trucks
